Washington, DC 20510

The Honorable Bernie Sanders
Ranking Member
U.S. Senate Committee on the Budget
332 Dirksen Senate Office Building
Washington, D.C. 20510

Dear Chairman Enzi and Ranking Member Sanders:

This week the Budget Committees will markup the FY16 budget resolutions. One proposal being considered would shift the accounting methods for federal loan and guarantee programs to fair value accounting from the Federal Credit Reform Act of 1990 (FCRA). This change could add phantom costs onto these programs, and have a significant impact on the Appropriations process.

While fair value seems like a reasonable measure of the cost of a federal program – it does not reflect reality. Fair value accounting places a private market value on programs run by the federal government. Federal loan and loan guarantee programs are fundamentally different than their private sector counterparts. They were not created to be profit-making and are required to function under all market conditions unlike for-profit programs which tend to exit the market in adverse economic conditions. In many cases, these programs were actually created to fill market gaps in which the private sector did not operate. Using a private market discount rate would distort the actual costs of these programs to the federal taxpayer and add significantly to the federal deficit – even though these costs are not incurred.

Of the more than 100 credit programs in the federal budget, more than 44 of these programs are cost neutral or make money for the government as currently scored. But, under fair value accounting, more than 75% of these programs would appear to cost money – mandating policy changes or additional appropriations to offset these phantom costs.¹

These programs fall across all areas of government: small business loans, veterans' housing loans, rural utility loans, FHA loan guarantees, transportation and infrastructure loans, student loans, and agriculture loans. These programs would now need to be made either significantly more expensive to borrowers, or given an increased appropriation - billions of dollars – to cover costs that only appear on paper.

The below signed organizations strongly urge you to oppose the inclusion of any language mandating fair value accounting in the FY16 budget resolution. Adding a placeholder for inapplicable and imaginary private sector costs that the government does not incur simply complicates the appropriations process and makes the budget a less accurate reflection of actual government spending.

Sincerely,

American Council on Education
Community Home Lenders Association
Council for Affordable and Rural Housing
Institute of Real Estate Management
National Affordable Housing Management Association
